

Get Your Patient's Hair Score With HairCheck

By the time hair loss is visible, 50% or more of the hair in the affected site will be gone. Patients turn to you for professional advice about their hair loss. Don't wait for balding to occur before you take action! HairCheck can detect early thinning 10 to 15 years in advance and offer the opportunity for earlier treatment and more likely re-growth. For the first time, doctors can monitor how their hair loss patients are responding to medical prescriptions or hair loss services. The patented HairCheck® technology gives a precise scientific measurement of how much hair is present in a localized area of your patient's head without cutting a single hair.

**The FIRST Scientific System
To Measure Hair Loss
& Hair ReGrowth**

**If You Have Hair Loss Patients –
You Need HairCheck**

**If It Can't Be Measured,
It Can't Be Managed!**

**Profitable
New
Service!**

Science is based on a system of numbers and every medical parameter can be assigned a numeric score. **Now hair can too!** How can you possibly manage a patient with hair loss, when you can't even measure how much hair the patient has? Now you can ... thanks to HairCheck® – a new diagnostic tool based on Trichometer technology. **For the very first time, you will be able measure hair... quickly and easily.** The results are more scientifically meaningful than any photograph, hair density count, or diameter measurement.

With HairCheck® You will Be Able To:

- ✓ Measure your hair loss patient's response to hair growth products.
- ✓ Measure hair loss and growth with scientific accuracy and confidence.
- ✓ Detect very early balding in young men who appear to have no loss.
- ✓ Detect and quantify hair breakage – a commonly underappreciated cause of hair loss in women.
